The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ball Screw Peripherals Support Unit competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ball screw peripherals support unit refers to a special component used to support and fix both ends of the ball screw, including bearing seats, preloaded angular contact bearings, locking structures and mounting flanges. It is an indispensable supporting device in the screw transmission system. Its main function is to provide stable axial/radial support during high-speed or heavy-load operation to prevent the screw from shaking and deflecting, and ensure transmission accuracy and system rigidity. According to the installation position and force direction, it is usually divided into a fixed end (such as EK, FK, BK type) and a support end (such as EF, FF, BF type), and is widely used in high-precision linear transmission systems such as CNC machine tools, automation modules, semiconductor handling, and industrial robots. Through preloaded bearing design and high-precision processing, the support unit can effectively absorb impact and axial force during operation, and is a key component for high-efficiency, low-vibration, and long-life operation of the screw system.

The global Ball Screw Peripherals Support Unit market size was estimated at USD 604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
