Abstracts

Balloon Infuser or Elastomeric pumps are disposable, non-electronic medication pumps that deliver fluids such as analgesics, antibiotics, etc. into a patient's body in controlled amounts. A balloon infusion pump is a medical device used to deliver fluids, medications, or nutrients to a patient over a specific period of time. These pumps utilize an elastomeric balloon reservoir that gradually compresses and delivers the contents at a controlled rate. There is a growing trend towards providing healthcare services in the comfort of a patient's home. Elastomeric balloon infusion pumps are well-suited for home use due to their simplicity, portability, and self-administration capabilities. This trend can drive the demand for these pumps. Elastomeric pumps are generally more cost-effective compared to electronic infusion pumps, making them an attractive option for healthcare facilities and patients seeking affordable solutions for continuous medication delivery.
