Abstracts

Ballscrew support bearings, also known as ballscrew fixed-end or fixed-side bearings, are specialized bearing units designed to provide axial and radial support for the precision screw shafts in ballscrew assemblies, which are critical components in motion control systems for converting rotary motion into linear motion with high efficiency and accuracy; these bearings typically incorporate angular contact ball bearings arranged in a duplex or triplex configuration, preloaded to eliminate axial play and ensure rigidity, and are often housed in compact, sealed units with flanges for easy mounting, enabling them to handle high thrust loads, minimize deflection, and maintain precise positioning in applications such as CNC machinery, robotics, aerospace actuators, and industrial automation equipment.

The global Ballscrew Support Bearings market size was estimated at USD 1045.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
