Report Overview

An increase in the preference for low-cost and highly efficient power generating sources has resulted in a rise in the use of renewable sources like sun, wind, and sea waves. Wind Energy requires very limited capital as compared to other renewable resources and holds a wide-scale commercial and domestic application. Rising environmental concerns have resulted in increased demand for low-cost products used in manufacturing the medium required for generating energy by the Renewable energy sources. Bamboo Composites provide an excellent, efficient, and low-cost medium for manufacturing components required for generating Wind Power. Turbine Blades made by using Bamboo Composites have a slow rotational speed and generate a limited amount of energy which has made them an excellent choice for small-scale installations in farms and commercial centers. The presence of a higher stiffness-to-weight ratio has resulted in increased demand for Bamboo Composites by the Wind Power generation equipment manufacturing industry.

The global Bamboo Composite for Wind Power market size was estimated at USD 131 million in 2023 and is projected to reach USD 157.94 million by 2032, exhibiting a CAGR of 2.10% during the forecast period.
