Abstracts

Bandage soft contact lenses are therapeutic medical devices designed to protect, promote healing, and manage pain in the cornea following injury, surgery, or disease. Unlike standard corrective lenses, these specialized lenses are typically not powered for vision correction but instead serve as a protective barrier, shielding the eye's surface from friction caused by blinking, while maintaining a moist environment conducive to epithelial regeneration and reducing discomfort. They are often made from high water content hydrogel or silicone hydrogel materials to ensure oxygen permeability and are prescribed for conditions such as corneal abrasions, erosions, post-operative care (e.g., after PRK or corneal transplant), severe dry eye, or bullous keratopathy.

The global Bandage Soft Contact Lenses market size was estimated at USD 2480.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
