Abstracts

A barcode or bar code is a method of representing data in a visual, machine-readable form. Initially, barcodes represented data by varying the widths, spacings and sizes of parallel lines. These barcodes, now commonly referred to as linear or one-dimensional (1D), can be scanned by special optical scanners, called barcode readers, of which there are several types.Emerging economies like India and China create new opportunities in the anti-counterfeit packaging market. Rising disposable incomes, increasing urbanization, and a growing middle-class population will drive the demand for anti-counterfeit packaging. There has been an increase in online sales in India and China. The main reason is that the world has become more counterfeit-prone due to a significant increase in the number of products transported and handled by the same number of people daily. Counterfeiters and forgers have made it easier to pass the counterfeit products and decrease the effectiveness of the anti-counterfeit packaging products. Furthermore, key manufacturing sectors such as agriculture, apparel and clothing, food and beverages, and pharmaceuticals have registered the highest growth in the emerging economies, which provides an excellent opportunity for packaging to set up their base and expand their operations.

The global Barcode Anti-Counterfeit Packaging Technology market size was estimated at USD 72160.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
