### Report Overview

A barcode scanner is an input device that captures and reads the information in a barcode. Basic scanners simply record and translate the barcode into numbers and/or letters, that code must be sent to a computer database for further information. This can be done with a wired connection (such as through a serial or keyboard port) or wirelessly. Barcode Mobile Computers come equipped with a built-in barcode scanner, often a laser scanner with other features to ensure accurate reading, but can do so much more. They are the PC and the scanner in one device.
