Abstracts

This report studies the Bare Metal Stent market. Bare metal stents are usually metal and have no special coating. They act as scaffolding to prop open blood vessels after they are widened with angioplasty. As the artery heals, tissue grows around the stent, holding it in place. However, sometimes an overgrowth of scar tissue in the arterial lining increases the risk of re-blockage. It is a mesh-like tube of thin wire. The first stents licensed for use in cardiac arteries were bare metal - often 316L stainless steel. More recent stents use cobalt chromium alloy.

The global Bare Metal Stents market size was estimated at USD 604.67 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
