Abstracts

Grease is a semi-solid mechanical parts lubricant made by adding thickeners and lubricating additives to base oil. According to the thickener, it can be divided into soap-based grease and non-soap-based grease. Barium-based grease is a soap-based grease. It is a grease made of a complex barium soap base as a thickener and a variety of additives such as antioxidants, rust inhibitors, and corrosion inhibitors. Barium-based grease has good shear resistance and extreme pressure resistance, good water resistance and protective properties. It is an excellent lubricant and protective sealing material that is difficult to dissolve in ordinary solvents. In terms of product types, synthetic oil occupies a dominant position, accounting for 88%. From the perspective of product market application, barium grease is most widely used in the textile printing and dyeing industry, accounting for 38%, because it has high temperature resistance and DN value can be as high as 1 million or more. As a new and special grease, there have been few barium grease manufacturers in the world. The main reason is that the raw materials and reaction process are not mature enough. At present, the main manufacturers include Klüber Lubrication, Carl Bechem, Pseinu, Great Wall Lubricants and Brugarolas.

Market Trends and Prospects

Technological Innovation: With the continuous advancement of science and technology and the continuous upgrading of industrial manufacturing, the market demand for high-performance and high-quality greases continues to increase. This has prompted barium grease manufacturers to continuously innovate technology and upgrade products to meet market demand.

Environmental protection requirements: With the continuous improvement of global environmental awareness, the market demand for environmentally friendly greases is also increasing. Barium greases, as a grease that is difficult to dissolve in ordinary solvents, have good environmental performance and are in line with market development trends.

Application field expansion: In addition to traditional fields such as textile printing and dyeing, shipbuilding industry, and precision machinery, the

application of barium greases in emerging fields such as new energy vehicles and aerospace is also increasing. The demand for high-performance greases in these emerging fields will further promote the development of the barium-based grease market.

The global Barium Grease market size was estimated at USD 290.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
