## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Barium Titanate Varistor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Barium titanate varistor is a varistor element made of barium titanate (BaTiO<sub>3</sub>) ceramic material with nonlinear resistance characteristics. When the applied voltage exceeds its specific threshold, the resistance value drops rapidly, allowing current to pass, thereby protecting the circuit from overvoltage damage. It is characterized by high stability, strong voltage resistance and long service life, and is widely used in overvoltage protection, surge suppression and circuit protection in electronics, power and communication equipment. Barium titanate material enables it to perform well in harsh environments such as high frequency and high temperature.

The global Barium Titanate Varistor market size was estimated at USD 991.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
