Abstracts

Barrier blown film lines are specialized extrusion systems designed to produce multilayer plastic films with enhanced barrier properties against oxygen, moisture, aromas, and other environmental factors, primarily used in packaging applications for food, pharmaceuticals, and industrial products. These systems typically incorporate multiple extruders?each processing different polymer materials such as polyethylene (PE), polypropylene (PP), ethylene vinyl alcohol (EVOH), or polyamide (PA)?which are co-extruded and blown into a bubble to form a seamless tubular film with precisely engineered layer structures. The resulting films offer critical performance characteristics including extended shelf life, improved product protection, and sustainability advantages through material reduction, aligning with evolving industry demands for high-performance, lightweight, and recyclable packaging solutions.

The global Barrier Blown Film Line market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
