Report Overview

Basalt Fiber is a type of inorganic, non-metallic, and high-performance fiber material derived from natural basalt rock. It is produced through a process that involves melting basalt rock at high temperatures, followed by extrusion and rapid cooling, which results in the formation of fine fibers. This material is known for its high strength, heat resistance, and chemical stability, making it suitable for various industrial applications such as reinforcement in composite materials, fireproofing, and insulation. Basalt Fiber is also recognized for its eco-friendly properties, as it is derived from a renewable resource and has a lower environmental impact compared to other synthetic fibers. Its unique properties, such as low thermal conductivity and high electrical resistance, further enhance its versatility in applications where durability and performance under extreme conditions are required.
