Abstracts

Basalt multiaxial fabric is a high-performance technical textile composed of multiple layers of basalt fiber rovings oriented in different directions—typically 0°, 90°, and 45°—and stitched together using polyester or other compatible yarns to form an integrated, dimensionally stable reinforcement material. Derived from volcanic rock, basalt fibers offer exceptional thermal stability, chemical resistance, mechanical strength, and environmental sustainability compared to traditional glass or carbon fibers. This fabric is engineered to provide multidirectional reinforcement in composite structures, optimizing load distribution, impact resistance, and structural integrity across applications such as aerospace, marine, automotive, construction, and wind energy. Its multi-axial architecture allows for tailored mechanical properties to meet specific design requirements, making it a versatile solution for advanced composite manufacturing where weight reduction, durability, and performance under extreme conditions are critical.

The global Basalt Multiaxial Fabric market size was estimated at USD 185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
