Abstracts

A Base Transceiver Station (BTS) is a fixed radio transceiver in a mobile network that serves as the primary hub for wireless communication between mobile devices and the network operator's core infrastructure, facilitating voice, data, and signaling transmission within its designated geographic coverage area, or cell. It consists of antennas, transceivers, amplifiers, and combiners that enable bidirectional radio frequency communication, while also handling channel allocation, power control, and handover procedures to maintain connectivity as users move between cells. Functioning as a critical node in cellular architecture?such as 2G, 3G, 4G, and 5G networks?the BTS interfaces with base station controllers or directly with the core network, playing an essential role in network capacity, quality of service, and overall operational performance.

The global Base Transceiver Station market size was estimated at USD 58250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
