Abstracts

Bath anti-creasing agent refers to a specialized chemical product designed to minimize or prevent the formation of wrinkles and creases in fabrics during the washing process, particularly in high-efficiency or commercial laundry settings. It functions by relaxing fabric fibers and reducing surface tension in the wash water, allowing garments to move more freely and dry with fewer visible wrinkles, thereby decreasing the need for ironing or steaming post-wash. These agents are commonly used in both household and industrial laundry applications, catering to consumers seeking convenience, time savings, and improved fabric care.
