Report Overview:

Battery charger ICs are integrated circuits (IC) that are used to charge batteries. Important features for battery charger ICs include over-voltage protection and over-current protection. Devices with a soft-start feature condition the battery for several minutes before performing a fast charge. Devices with a charge status indicator have a built-in monitor that displays the amount of current supplied and/or the amount of charge applied. In response to concerns about the environmental impact of using lead (Pb) in solder finishes, some battery charger ICs do not contain lead in any form.

The Global Battery Charge Management IC Market Size was estimated at USD 537.00 million in 2023 and is projected to reach USD 770.41 million by 2029, exhibiting a CAGR of 6.20% during the forecast period.
