Report Overview

Battery technology industry is a part of the battery industry which comprise companies that manufacture batteries of different types, functionality and size. Basically, a battery, also known as a galvanic cell, is an energy storage device, where electrical energy is trapped within the battery in chemical form by forcing positively charged ions to inhabit only one of two electrodes within the battery which is the cathode, and negative ions to inhabit the other electrode which is the anode. So, when the battery is connected to an electrical circuit, the positive ions pass through the battery to the other electrode, while electrons are forced to flow through the electrical circuit in the opposite direction and provide the electricity needed to run our electrical devices. Batteries are simply a controlled chemical reaction that is designed to provide electrons on the anode electrode to power an electrical circuit.
