Report Overview

The Battery Disconnect Unit (BDU) is a crucial part of an electric vehicle's power distribution architecture, functioning as the internal high-voltage connection and protection mechanism within the battery system. It manages the safe and controlled disconnection of the battery from the vehicle's high-voltage system during faults, maintenance, or crashes. Structurally, the BDU can be installed either inside the battery pack or externally as part of a Battery Junction Box. Internal installations generally emphasize integration and space efficiency, while external setups prioritize accessibility and robust protection.

BDUs are typically housed in IP67-rated enclosures to ensure protection against dust and water ingress, particularly when mounted outside the battery box. These units must meet rigorous safety, thermal, and electrical standards, and are increasingly expected to support features like real-time diagnostics, overcurrent protection, and thermal management. As the EV market scales, collecting customer-specific requirements and enhancing service responsiveness are becoming central to BDU product design and deployment strategies.
