Abstracts

In this study, Battery Energy Storage Systems are discussed strictly from the battery subsystem perspective, covering three layers only: lithium-ion cells, modules and battery packs (PACKs). Upstream activities include raw materials and cell manufacturing; midstream players assemble cells into standard modules and then integrate them into high-voltage packs with basic BMS and thermal structures; downstream, packs are supplied to ESS integrators, EPCs and branded C&I/residential storage products. Profitability typically increases along the chain: cell makers are highly exposed to commodity price swings and operate with relatively thin margins; module suppliers add value through mechanical design, safety and standardization; pack manufacturers capture higher prices and healthier margins by offering high-voltage architectures, lifetime management and project-specific customisation, especially when backed by large-scale capacity and long-term offtake contracts.

The global Battery Energy System Storage market size was estimated at USD 30852.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
