Abstracts

This report focus on Battery Felts market. PAN-based carbon and graphite felts are used as electrode backings in a variety of battery designs including vanadium redox flow batteries (VRB). The high conductivity, high purity, and chemical resistance of felts make them ideal for the demanding design criteria of flow battery developers. Carbon and graphite felts find wide applications due to their properties such as high thermal insulation, broad operational range, chemical stability, and lightweight. APAC was the fastest-growing carbon felt and graphite felt market, in terms of value and volume. The increasing demand for carbon and graphite felts from the emerging economies and rising government spending on infrastructural projects are the main factors contributing to the market growth in APAC. The increasing demand for high-performance batteries and improved performance of carbon fiber in high temperature applications are driving the carbon felt and graphite felt market. The absence of quality control in developing economies is restraining the market growth.

The global Battery Felts market size was estimated at USD 243.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Battery Felts market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
