Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Formation and Grading Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Battery formation and battery grading are post processes in the production of lithium batteries. Formation is the process of activating the positive and negative electrode materials inside the battery through charging and discharging, thereby activating the battery. Grading takes place after formation, where the battery undergoes charge-discharge cycles to test various parameters, and based on the measured parameters, the batteries are sorted into groups. Battery formation and grading equipment directly impact battery performance, stability, and quality, ensuring uniformity within battery packs, reducing safety risks and improving production efficiency, ultimately leading to cost savings and compliance with industry standards. The battery formation and grading machine market is witnessing strong growth, driven by the rapid expansion of the lithium-ion battery industry, especially in electric vehicles (EVs), energy storage systems (ESS), and consumer electronics. Formation and grading are critical steps in battery manufacturing, directly impacting performance, lifespan, and safety. As production scales increase and quality standards rise, demand for automated, high-precision equipment is accelerating. China dominates global consumption and production, followed by South Korea, Japan, and the United States. With large-scale gigafactories under development worldwide, the market is expected to grow at a high CAGR over the next five years.

The global Battery Formation and Grading Machine market size was estimated at USD 1510.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
