Abstracts

Diethyl Carbonate (DEC for short) is an important substance in carbonate. Its chemical formula is $C_5H_{10}O_3$. It is a colorless liquid with a special fragrance at room temperature. It can be used as an intermediate in chemical production and has a wide range of uses. Battery grade is used in Li-ion batteries as electrolyte. Currently, this grade is very popular due to the development of the Li-ion batteries. However, It is the highest grade and the most difficult for manufacturers to produce. In the context of Li-ion batteries, battery-grade DEC is utilized as an electrolyte component due to its favorable properties for ion transport and stability within the battery's electrochemical environment. Its role in batteries includes enhancing the battery's performance, cyclic stability, and high-temperature tolerance. It's true that producing high-quality battery-grade DEC can be challenging for manufacturers, as it requires meeting strict purity and quality standards to ensure optimal battery performance and safety. The demand for high-quality DEC has increased alongside the growth of the Li-ion battery market, driven by the increasing use of portable electronic devices, electric vehicles, and renewable energy storage systems. As technology continues to advance and the demand for efficient and reliable energy storage solutions grows, the importance of battery-grade DEC in Li-ion battery applications is likely to persist. Manufacturers will continue to focus on refining their production processes to meet the stringent requirements of this high-grade substance.

The global Battery Grade Diethyl Carbonate (DEC) market size was estimated at USD 175.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
