Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Grade Graphite Anode Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The anode is the negative electrode of a primary cell and is always associated with the oxidation or the release of electrons into the external circuit. In a rechargeable cell, the anode is the negative pole during discharge and the positive pole during charge. The vast majority of lithium-ion batteries use graphite powder as an anode material. Graphite materials are either synthetically-produced (artificial graphite) or mined from the ground (natural graphite), then heavily processed before being baked onto a copper foil to serve as anodes. The market for battery-grade graphite anode material is primarily driven by the strong demand for high-energy-density and long-cycle-life lithium-ion batteries in electric vehicles and energy storage systems. With countries worldwide committing to carbon-peak and carbon-neutral targets, sales of electric vehicles have surged, rapidly increasing demand for anode materials in power battery systems. The expansion of energy storage markets?including storage paired with renewable energy generation?also contributes to rising demand for large-capacity lithium-ion batteries and hence graphite anode materials. Simultaneously, battery safety, longevity and cost pressures are pushing manufacturers and material suppliers to adopt higher-specification graphite anode materials. The ongoing technological advances in both synthetic and natural graphite?improving particle size, impurity control and coating processes?are elevating overall anode system performance, thereby further expanding the market for graphite anode materials. Global key players of Battery Grade Graphite Anode Material include BTR, Shanghai Putailai (Jiangxi Zichen), Shanshan Corporation and Showa Denko Materials, etc. Global top four manufacturers hold a share over 50%. China is the largest producer of Battery Grade Graphite Anode

Material, with a share over 70%, followed by Japan.

The global Battery Grade Graphite Anode Material market size was estimated at USD 8657.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 30.10% during the forecast period.
