## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Grade Sodium Carbonate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of battery-grade sodium carbonate reached 1.0051 million tons, with an average selling price of US\$570 per ton. The annual production capacity of a single battery-grade sodium carbonate production line is approximately 80,000 tons, with a gross profit margin of approximately 20.2%. Battery-grade sodium carbonate is a high-purity sodium carbonate specifically used as a cathode material and electrolyte raw material for sodium batteries, and its quality requirements are higher than those of ordinary sodium carbonate. Upstream raw materials for battery-grade sodium carbonate include limestone, sodium bicarbonate, and other auxiliary materials. The midstream consists of battery-grade sodium carbonate manufacturers, while the downstream mainly includes industries such as power batteries and 3C batteries. The battery-grade sodium carbonate market is in a phase of steady expansion, driven primarily by the continued demand for high-purity alkaline materials from the new energy industry, particularly the purification, drying, and stabilization requirements in lithium-ion and sodium-ion battery manufacturing, as well as the persistent and rigid demand for high-purity sodium carbonate from traditional industries such as glass and chemicals. The market landscape is evolving towards customized products with high purity, low iron, low moisture content, and controllable particle size. The supply chain is focusing on improving both the stability of upstream raw materials and the stability and compliance of downstream end-use applications. Regionally, North America and Europe serve as high-end application and compliance demonstration zones globally, while the Asia-Pacific region (especially China, India, and Southeast Asia) is experiencing rapid growth driven by capacity expansion, cost

advantages, and localized supply chains.

The global Battery Grade Sodium Carbonate market size was estimated at USD 573.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Battery Grade Sodium Carbonate market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
