## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Interface System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Battery Interface System (BIS) is an integrated device or system that manages the safe, efficient, and reliable connection between battery energy storage units and downstream electrical systems, such as loads, inverters, or the electrical grid. It typically handles power flow control, voltage/current regulation, state-of-charge monitoring, protection against overcharge/discharge, and communication with battery management systems (BMS). Upstream, it depends on battery modules, sensors, power electronics components, and BMS units. Downstream, it interfaces with inverters, DC/AC converters, microgrid controllers, or end-user loads to deliver stabilized energy. By coordinating battery operation with system demand, BIS enhances energy efficiency, prolongs battery life, and enables intelligent management in stationary energy storage, electric vehicles, and hybrid renewable energy systems.

The global Battery Interface System market size was estimated at USD 170.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
