Abstracts

Battery Manufacturing Software is a type of specialized industrial software designed for the entire lifecycle manufacturing process of various batteries, including lithium-ion batteries and solid-state batteries. Its core function is to integrate data and processes across all stages of battery production through digital and intelligent technologies. This enables end-to-end control from electrode preparation, cell assembly, formation testing to module/pack integration, providing battery manufacturers with an integrated solution. It is a core digital tool supporting the efficient, high-precision, and highly consistent production of new energy batteries. Market demand is highly intertwined with the new energy battery industry cluster, exhibiting a pattern led by three core regions: Asia-Pacific, North America, and Europe. The Asia-Pacific region is the core growth engine, with China, as the world's largest producer of new energy vehicles and batteries, becoming the core driving force of the regional market. In addition, countries such as Japan, South Korea, and India have also formed stable market demand due to the needs of their domestic battery companies and automotive industries. The North American market, driven by the electrification transformation of automakers like Tesla and significant investments in the energy storage industry, continues to see strong demand for battery manufacturing software, with a focus on the software's compatibility with the local supply chain. The European market benefits from the widespread adoption of electric vehicles promoted by the EU's carbon neutrality policy. Automakers and battery factories in countries like Germany and France have a strong demand for software features such as process simulation and compliance traceability, supporting stable market growth. Meanwhile, emerging markets such as South America, the Middle East, and Africa, with the gradual expansion of battery production capacity, are becoming potential growth areas.

The global Battery Manufacturing Software market size was estimated at USD 5319.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
