Abstracts

The battery positioning terminal is an independently powered GPS/Beidou positioning device, mainly used in asset tracking, vehicle monitoring, anti-theft management and other application scenarios. Unlike traditional vehicle-mounted positioning devices, the battery positioning terminal does not require an external power supply and relies on a built-in battery for power supply. It is suitable for a variety of scenarios such as non-powered vehicles, logistics goods, and shared travel. Its core advantages lie in wireless installation, long battery life, and low power consumption, which can provide efficient and stable location monitoring and security management functions. The terminal usually has functions such as GPS/Beidou real-time positioning, remote data upload, electronic fence, vibration/disassembly alarm, and intelligent power saving mode. Some high-end models support NB-IoT, 4G/5G communication, Bluetooth low energy and other technologies to achieve more accurate and stable positioning and data transmission.

The global Battery Positioning Terminal market size was estimated at USD 96.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.40% during the forecast period.
