## Abstracts

A battery powered roll pusher is a device used to move cylindrical rolls, which is driven by a battery - powered motor. The battery provides the necessary electrical energy to drive the motor. Some advanced models are equipped with intelligent battery management systems, which can monitor the battery status in real - time, including voltage, current, and remaining capacity, to ensure the safe and efficient operation of the battery. Drive System consists of a DC motor and a speed control mechanism. The motor converts electrical energy into mechanical energy to provide the driving force for moving the rolls. The speed control mechanism allows the operator to adjust the moving speed of the roll pusher according to the actual operation requirements, usually through a variable - speed throttle or a control panel.
