## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Roller Press competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of battery roller presses will reach approximately 11,780 units, with an average selling price of US\$50,000 per unit. A battery roller press is a key piece of equipment used in lithium-ion battery manufacturing, primarily for pressing the positive and negative electrode materials into uniform sheets. Its operating principle is similar to that of a noodle maker, where two high-hardness rollers compact the electrode material under a specific pressure and temperature, thereby improving the material's density, uniformity, and mechanical strength. This process not only affects the battery's energy density, cycle life, and safety, but also significantly impacts subsequent processes such as slitting, winding, and packaging.

The global Battery Roller Press market size was estimated at USD 589.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Battery Roller Press market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
