## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Battery Shredder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Battery Shredder production reached approximately 1240 units, with an average global market price of around K US\$ 191.8 per unit. Battery shredder is a heavy-duty crushing equipment specifically designed for processing various types of waste batteries, incorporating explosion-proof features and special alloy cutters to achieve mechanical decomposition of battery materials. The system utilizes multi-stage shearing and crushing processes to reduce battery casings and internal components into uniform particles, equipped with inert gas protection systems and spark detection devices to ensure operational safety, providing pre-treatment for subsequent metal recovery and material separation while meeting stringent environmental regulations for hazardous waste treatment. The prevailing market view is that the battery shredder industry is on the cusp of a global growth surge, fueled by stringent environmental regulations and the impending wave of retired power batteries. The market is rapidly shifting from a focus on basic shredding functionality to a premium on safety integration, intelligent operation, and seamless compatibility with downstream hydrometallurgical processes. Future competitiveness will be determined by a manufacturer's ability to deliver integrated solutions incorporating inert atmosphere protection, real-time monitoring, and efficient emission control, rather than offering standalone shredding units. Manufacturers with core technologies and the ability to provide reliable, internationally certified equipment are expected to lead the market consolidation.

The global Battery Shredder market size was estimated at USD 238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the

forecast period.
