Report Overview

The focusing flat-top beam shaper is used to convert a Gaussian beam into an Airy disk profile to control the intensity distribution of the laser spot. The output beam is almost 100% effectively shaped into a flat-top or circular beam profile. Focusing the beam after a flat-top beam shaper results in the loss of the flat-top profile. Focused flat-top beam shapers provide an alternative solution for obtaining flat-top beams by generating an Airy disk beam profile.
