Report Overview

Beam warping can be used to directly produce the weaver's beam in a single operation, by winding wrap yarns onto a beam especially in preparation for weaving, slashing, and wrap knitting. Beaming machines are specially used for direct beaming the strong yarns that do not require any sizing such as when the number of warp ends on the warp beam is comparatively small and continuous. Beaming machines are used in the manufacturing of beam warp yarn, which is then modified into thin and thick large knots.

The global Beaming Machines market size was estimated at USD 142.50 million in 2023 and is projected to reach USD 184.31 million by 2032, exhibiting a CAGR of 2.90% during the forecast period.
