Bearing ball is a part used in industrial production, which is a part of bearing. Balls are one of the oldest mechanical devices. They have been used as bearing components on Roman ships as early as 40 AD. At present, people are still constantly developing new design, manufacturing technology and application functions of precision balls. With the development of micro-ball manufacturing technology, the factory has rapidly improved the level of disk drives, dental drills, satellite guidance systems and other important applications.
