Abstracts

Bearing locating rings, also known as bearing lock rings or locking collars, are specialized mechanical components designed to axially secure and precisely position bearings on shafts or within housings. These rings typically feature a split design with one or more set screws that, when tightened, create a firm clamping force against the shaft, preventing undesired axial movement while allowing for straightforward installation, adjustment, and removal. They are engineered to maintain alignment, reduce vibration, and enhance the operational reliability of rotating assemblies across various industrial applications, serving as a critical alternative to press fits, adhesives, or other permanent mounting methods where adjustability and serviceability are priorities.

The global Bearing Locating Rings market size was estimated at USD 1550.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
