Report Overview

The bearing hot-loading constant temperature oven is a heating device specially used for the bearing hot-loading process. It ensures that the bearing reaches and maintains the required temperature during the hot-loading process by providing a constant temperature environment, thereby improving the hot-loading effect and product quality. The bearing hot-loading constant temperature oven adopts a high-precision temperature controller, which can quickly respond to temperature changes in the box, and controls the heating device through AI intelligent recognition technology to achieve constant temperature. High-precision armored sensors are used to reduce control recognition errors and ensure the accuracy of temperature control. The hot air circulation in the box is designed with a unique air duct to ensure that the box can achieve a very high temperature uniformity. Made of high-strength steel plate and 304# mirror stainless steel plate, it has a solid appearance, high cleanliness in the box, and no dust. Bearing hot-loading constant temperature oven is widely used in laboratories, laboratories and production sites of scientific research units, professional colleges, industrial and mining enterprises, such as drying, curing, baking, wax melting and disinfection.
