### Report Overview

A bedpan macerator (or masher) is a machine specially designed for the hygienic disposal of pulp bed pans. Using minimal power and water they macerate the item(s) into small enough pieces to be passed safely into the foul water drainage. The user opens the lid, typically without having to use hands, and dispenses the item into a chamber; the lid then closes and seals, and spinning blades and cold water inside the chamber break apart the pulp into small items which are then rinsed down the drain. After 1-3 minutes the machine is ready to be used again.
