A bee smoker is a device used in beekeeping to calm honey bees. It is designed to generate smoke from the smoldering of various fuels, hence the name. It is commonly designed as a stainless steel cylinder with a lid that narrows to a gap with a half-inch diameter. The base of the cylinder has another small opening that is adjacent to a bellows nozzle. Pumping of the bellows forces air through the bottom opening. The cylinder also commonly has a wireframe around it acting as a structure the user can grab without risk of burning their hand.
