Abstracts

A Benchtop nuclear magnetic resonance spectrometer (Benchtop NMR Spectrometer) refers to a Fourier transform nuclear magnetic resonance (FT-NMR) spectrometer that is significantly more compact and portable than the conventional equivalents, such that it is portable and can reside on a laboratory benchtop. This convenience comes from using permanent magnets, which have a lower magnetic field and decreased sensitivity compared to the much larger and more expensive cryogen cooled superconducting NMR magnets. Instead of requiring dedicated infrastructure, rooms and extensive installations these benchtop instruments can be placed directly on the bench in a lab and moved as necessary (e.g., to the fumehood). These spectrometers offer improved workflow, even for novice users, as they are simpler and easy to use. They differ from relaxometers in that they can be used to measure high resolution NMR spectra and are not to the determination of relaxation or diffusion parameters. Global Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer key players include Bruker, Thermo Fisher, Oxford Instruments, Nanalysis, Spinlock, etc. Global top 3 manufacturers hold a share about 74%. Europe is the largest market, with a share about 30%, followed by North America, with a share about 28 percent.

The global Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
