Report Overview

A Benchtop nuclear magnetic resonance spectrometer (Benchtop NMR Spectrometer) refers to a Fourier transform nuclear magnetic resonance (FT-NMR) spectrometer that is significantly more compact and portable than the conventional equivalents, such that it is portable and can reside on a laboratory benchtop. This convenience comes from using permanent magnets, which have a lower magnetic field and decreased sensitivity compared to the much larger and more expensive cryogen cooled superconducting NMR magnets. Instead of requiring dedicated infrastructure, rooms and extensive installations these benchtop instruments can be placed directly on the bench in a lab and moved as necessary (e.g., to the fumehood). These spectrometers offer improved workflow, even for novice users, as they are simpler and easy to use. They differ from relaxometers in that they can be used to measure high resolution NMR spectra and are not to the determination of relaxation or diffusion parameters.

The global Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer market size was estimated at USD 128.30 million in 2023 and is projected to reach USD 179.47 million by 2032, exhibiting a CAGR of 3.80% during the forecast period.

North America Benchtop Nuclear Magnetic Resonance (NMR) Spectrometer market size was estimated at USD 35.64 million in 2023, at a CAGR of 3.26% during the forecast period of 2024 through 2032.
