Report Overview:

A bendy bus is an articulated vehicle used in public transportation. It is usually a single-deck design, and comprises two rigid sections linked by a pivoting joint (articulation) enclosed by protective folding bellows on the in- and outside the vehicle (usually of gray or black colour) and a cover plate on the inside of the vehicle. This arrangement allows a longer legal overall length than single-decker rigid-bodied buses, and hence a higher passenger capacity, while still allowing the bus to maneuver adequately on the roads of its service route.

The Global Bendy Bus Market Size was estimated at USD 2991.12 million in 2023 and is projected to reach USD 3448.53 million by 2029, exhibiting a CAGR of 2.40% during the forecast period.
