Abstracts

Benzenecarboxylic acid, more commonly known as benzoic acid, is an aromatic carboxylic acid characterized by a benzene ring core substituted with a single carboxyl group (-COOH). This white crystalline solid occurs naturally in various plants and resins, most notably in gum benzoin, and is industrially synthesized from toluene via catalytic oxidation. It functions primarily as a precursor to a wide range of important chemical derivatives, including sodium benzoate (a widely used food preservative), benzoyl chloride (used in plastics and peroxides), phenol (via decarboxylation), and caprolactam (for nylon production). Its applications span industries such as food and beverage preservation, pharmaceuticals (as an antifungal and preservative), personal care products, plasticizers, and agrochemicals, with its utility driven by its antimicrobial properties, reactivity, and role as a fundamental building block in organic synthesis.

The global Benzenecarboxylic Acid market size was estimated at USD 1850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
