Abstracts

Benzoate light stabilizers are a class of UV absorbers based on benzoate structures, which are widely used in plastics, coatings, fibers and other materials to prevent photodegradation, discoloration and embrittlement of materials due to UV exposure. These light stabilizers protect the molecular structure of the material and extend the service life of the product by absorbing UV rays and converting them into harmless heat energy. Due to their high UV absorption capacity, benzoate light stabilizers are particularly suitable for outdoor products such as plastic films, architectural coatings and outdoor textiles.

The global Benzoate Light Stabilizer market size was estimated at USD 137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
