The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Benzonase Nuclease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Benzonase Nuclease, a genetically engineered enzyme from *Serratia Marcescens*. It can degrade all forms of DNA and RNA, including single-stranded, double-stranded, linear, circular, native and denatured nucleic acids, digesting them into 5-monophosphate oligonucleotides of 3-8 bases in length, and has no base recognition specificity. At present, the market is mainly driven by biotechnology and pharmaceutical companies in North America and Europe, and countries such as the United States and Germany are in a leading position in the research and development and application of high-concentration universal nucleases. With the development of mRNA vaccines, macromolecular drugs, cell and gene therapy, the demand for high-purity universal nucleases continues to grow. From the perspective of product market application, the market demand for universal nucleases in medical and biological laboratories continues to grow, mainly used in genomic research, PCR amplification, molecular diagnosis, mRNA vaccine development, cell and gene therapy and other fields. With the advancement of precision medicine, regenerative medicine and biopharmaceutical technology, laboratories have a growing demand for efficient and broad-spectrum nucleases to remove nucleic acid contamination, improve experimental purity, and optimize biopharmaceutical processes.

The global Benzonase Nuclease market size was estimated at USD 165.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.30% during the forecast period.
