Report Overview

A Berek compensator (named after its inventor, the German physicist Max Berek) is a simple kind of tunable phase retardation plate. Alternative names are Berek waveplate and Berek tunable retarder. A Berek compensator consists of a single uniaxial birefringent crystal, having its extraordinary optical axis perpendicular to the parallel faces. For normal incidence, there is no phase retardation, but a variable degree of retardance can be introduced by tilting the plate against the beam. The obtained retardation is proportional to the square of the tilt angle. This arrangement acts as a tunable true zero-order waveplate ? in contrast to a Babinet-Soleil compensator, which is only an effective zero-order waveplate.
