### Report Overview

$\beta$ -Lactams are the most widely used class of antibiotics. Since the discovery of benzylpenicillin in the 1920s, thousands of new penicillin derivatives and related  $\beta$ -lactam classes of cephalosporins, cephamycins, monobactams, and carbapenems have been discovered. Each new class of  $\beta$ -lactam has been developed either to increase the spectrum of activity to include additional bacterial species or to address specific resistance mechanisms that have arisen in the targeted bacterial population. Resistance to  $\beta$ -lactams is primarily because of bacterially produced  $\beta$ -lactamase enzymes that hydrolyze the  $\beta$ -lactam ring, thereby inactivating the drug. The newest effort to circumvent resistance is the development of novel broad-spectrum  $\beta$ -lactamase inhibitors that work against many problematic  $\beta$ -lactamases, including cephalosporinases and serine-based carbapenemases, which severely limit therapeutic options.

The global Beta-lactam and Beta-lactamase Inhibitors market size was estimated at USD 28330 million in 2023 and is projected to reach USD 32319.59 million by 2030, exhibiting a CAGR of 1.90% during the forecast period.
