Report Overview

Metal containers, the second leading beverage container type in unit terms due to widespread use in the sizable soft drink and beer markets, will register minimal growth as a result of declining soft drink and beer production. However, good prospects are expected in fast-growing beverages such as energy drinks and eight-ounce soft drink cans. Demand for aluminum bottles will increase rapidly from a low base due to their upscale appearance, which provides a key element of product differentiation. Glass container demand will expand modestly, helped by the entrenched position of bottles in wine packaging and robust gains in markets such as RTD tea and other nonalcoholic RTD beverages, where glass' premium image continues to be a marketing advantage. Demographic trends, particularly above-average growth in the 55 and over population, an important wine cohort, will also aid glass container demand. Declining demand for paperboard containers will stem from continued supplantation of gabletop cartons by plastic bottles and aseptic cartons by pouches. However, healthy growth for soymilk, which utilizes a significant amount of paperboard containers, will boost demand. Additionally, bag-in-box wine containers will see robust gains based on their convenience and ongoing efforts to improve their image.
