### Report Overview:

A ball grid array (BGA) is a type of surface-mount packaging (a chip carrier) used for integrated circuits. BGA packages are used to permanently mount devices such as microprocessors. A BGA can provide more interconnection pins than can be put on a dual in-line or flat package. The whole bottom surface of the device can be used, instead of just the perimeter. The leads are also on average shorter than with a perimeter-only type, leading to better performance at high speeds.

The Global BGA Solder Ball Market Size was estimated at USD 122.87 million in 2023 and is projected to reach USD 177.27 million by 2029, exhibiting a CAGR of 6.30% during the forecast period.
