Abstracts

Bi folding speed gates are pedestrian access control systems consisting of two interlocking panels that fold inward and outward to allow or restrict passage, typically integrated with authentication technologies such as RFID, biometrics, or QR codes to manage high-traffic flow in secured environments like corporate offices, transportation hubs, stadiums, and government facilities. Unlike traditional turnstiles or full-height barriers, these gates offer a balance of robust security and aesthetic design, providing rapid, bidirectional access while minimizing physical obstruction when not in use, making them suitable for both indoor and outdoor installations where efficient crowd management and visual appeal are prioritized.
