Abstracts

Biaxial and uniaxial geogrids are commonly used reinforcement materials in civil engineering, mainly used to improve soil stability, increase bearing capacity, and prevent soil deformation. Their main differences lie in the stretching direction and application scenarios. Uniaxial geogrids are usually stretched in one direction, with high strength and tensile modulus, and are mainly suitable for engineering applications with unidirectional stress. The biaxial geogrid has tensile strength in both directions, with relatively high strength in both the transverse and longitudinal directions, making it more evenly stressed and suitable for bearing multi-directional loads.

The global Biaxial and Uniaxial Geogrids market size was estimated at USD 1581.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
