Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Biaxially Oriented Polypropylene Tape competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global Biaxially Oriented Polypropylene Tape production reached approximately 52857 million sqm?with an average global market price of around US$ 0.35 per sqm, a single-line production capacity of approximately 100,000 sqm/year, and a gross profit margin of approximately 10%-20%. Biaxially Oriented Polypropylene (BOPP) Tape is a pressure-sensitive adhesive tape based on a biaxially oriented polypropylene film that has been stretched in both machine and transverse directions to achieve high tensile strength, dimensional stability and good moisture resistance, then coated on one side with a pressure-sensitive adhesive (PSA), most commonly water-based acrylic or hot-melt rubber. In its dominant form – often referred to as BOPP packing tape or carton sealing tape – the tape is slit into narrow rolls (typically 36–72 mm width) and used on manual or automatic case-sealing equipment to close corrugated cartons in logistics, e-commerce and FMCG supply chains. The BOPP backing provides high tensile and impact strength, good abrasion and scuff resistance and a low cost per metre, while the PSA layer offers quick stick, adequate shear, peel adhesion and ageing resistance adapted to standard or recycled corrugated boards. Depending on the formulation and base film, BOPP tapes can be transparent, brown, coloured or printed, low-noise (quiet unwind) or standard, and tailored for performance at low temperatures (freezer applications) or higher storage and transport temperatures. They are also produced as jumbo rolls that are later slit and rewound by regional converters. Beyond carton sealing, BOPP tapes are used for bundling, light strapping, labelling, gift wrapping and general purpose packaging, and can be supplied with printed logos or messages for branding and tamper indication.Key upstream inputs

include PP resin for biaxially oriented film, acrylic monomers and emulsions, rubber and tackifying resins for hot-melt adhesives, solvents (for solvent-borne grades), release coatings and silicone for back-sizes, as well as additives such as antioxidants, UV stabilisers, slip and antiblock agents and colourants. In the midstream, BOPP film manufacturers extrude and biaxially orient polypropylene to create base films of various thicknesses and surface treatments, either selling plain BOPP film to tape coaters or integrating into vertically combined operations. Downstream, packaging distributors, converters and brand owners integrate BOPP tapes into packaging systems: they supply industrial and retail rolls, configure automatic case-sealing equipment, and design printed logo tapes for brand owners. End users include e-commerce fulfilment centres, FMCG manufacturers, 3PLs, retailers, electronics and general consumer-goods producers, who consume large volumes of BOPP tape in their carton-closing and bundling operations.

The global Biaxially Oriented Polypropylene Tape market size was estimated at USD 18500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
